DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 3, 6, 12, and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese patent 10017997 or Japanese patent 10060528 cited by applicant in IDS dated August 11, 2003 for the reasons set forth in the previous office action dated 12-02-04.

Response to Arguments

3. Applicant's arguments filed 5-23-05 have been fully considered but they are not persuasive. It was submitted that JP'528 nor JP'997 discloses or suggest a shadow mask made from a creep-resistant iron-nickel alloy of the specified composition and having the specified coefficient of thermal expansion in the specified temperature range. It is the examiner's position that the machine-English translations of JP'528 of JP'997, each teach a Fe-Ni alloy suitable for use as shadow mask or lead frame for television, and having a coefficient of thermal expansion property of less than $1.5 \times 10^{-6}/\text{degree C}$ below room temperature, see paragraphs 2,3 and 8 of machine-English translation of JP'528, and paragraphs 2,3 and 10 of machine-English translation of JP' 997.

4. Moreover, the English abstract of JP prior art alloy has a composition with constituents whose wt% ranges overlap those recited by the claims; such overlap establishes a prima facie case of obviousness because it would be obvious for one skilled in the art to select the claimed alloy wt% ranges over the broader disclosure of the prior art since the prior art has the same utility and similar low-coefficient of expansion properties, see MPEP 2144.05.

5. Even though prior art does not teach a low- coefficient of thermal expansion with a broad temperature range of 20 to 100C as recited by claim 12, such would be expected since compositional limitations are closely met, and in absence of proof to the contrary.

Conclusion

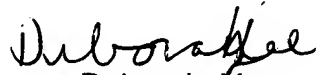

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
